

# Supplier/Vendor Certification

Stay compliant, ensuring the supplier or vendors are certified.

Vendor Certification within the Quality Management Suite, powered by eWorkplace Apps, enables manufacturers and distributors to manage certificates such as ISO, FSSAI, and FDA for vendors and stock items, ensuring they meet compliance requirements throughout the supply chain. Whether sourcing materials or working with distributors, automate certificate tracking and enforce controls that restrict, hold, or warn users when working with uncertified vendors during purchase transactions. This automated workflow ensures that every purchase transaction aligns with compliance protocols, reducing the quality and legal risks.

## Key Features Include

- Create and manage certificates centrally at the master screen.
- Define multiple attributes of certificates such as type, IDs, expiry dates, authority, and more.
- Associate certificates with specific vendor and stock items, including certificate expiry tracking.
- Automate restriction or warning triggers for uncertified vendors during purchase order, purchase receipt, and bill transactions.
- Mark the certificate requirement for the vendor as mandatory or not based on business needs.
- Analyze the certification status with an insightful vendor certification dashboard.

## Why Supplier/Vendor Certification?

- Verify that all the vendors are certified and meet the industry, regulatory, and compliance requirements.
- Reduce the chances of receiving non-compliant materials by working only with certified vendors that provide high-quality materials.
- Maintain up-to-date certification information to streamline audits and ensure compliance.
- Gain complete visibility into certification status with dashboards empowering smarter and faster decisions.
